SAMSARA ADMINISTRATION GUIDE

This table outlines the different Administration categories and resources to execute and troubleshoot tasks.

Category/ Topic	Description	Helpful Resources
Platform Administration		
Create Custom Roles (if applicable)	Using a custom role type will limit administrative access to the features allocated within their role, to manage or view the drivers, vehicles, and other devices. You can set up custom roles in "Settings -> Users & Roles".	Create Custom Roles
Update/ Manage Tags	You can leverage tags to segment your fleet into regions or business divisions. Tags can include vehicles and drivers. Users can be added to specific tags in order to limit their visibility to only those vehicles and drivers. You can configure tags in "Settings -> Tags & Attributes".	Create Tags
Manage Attributes	To track drivers and assets (such as vehicles, trailers, and equipment) by specific characteristics, you can use attribute labels. Attributes can be used to filter dashboard views and reports helping you to view, manage, and segment your data more efficiently.	Attributes Add Attributes in bulk
Invite Admins to Dashboard	In Settings -> Organization -> Users & Roles, select + Invite Use User invites expire in 24 hours, ensure to communicate w/ users after inviting. Have users check spam/ other folders for the Samsara invite.	Invite Admins Manage Admins in Bulk
Create Drivers	In Settings -> Drivers -> Driver App, select + Add a driver to access the driver creation form. Driver License is a required field if Driver is not ELD Exempt. Recommend Driver username to be Employee ID or username.	Driver Management Add/ Edit Drivers in Bulk
Configure Addresses	In Settings -> Addresses/Geofences -> + Address	Manage an Address
Review Unique Samsara Hardware setup and configuration (if applicable)	Some examples could be AGs, MEM, Forms, Sites, Sensors, etc.	Configurable Fleet Settings
Set up Single Sign On (if applicable)	SSO enables you to use a single identity provider (IdP) to manage access to Samsara. SSO is available for Samsara Dashboard users and driver app users.	Single Sign On
Wifi Hotspot Management	Setup & manage wifi hotspots and data available vs consumed	Wifi Hotspot Management
Program Administration		

ELD Configuration		
Enter Carrier Information	For DOT inspections, display carrier information on devices showing HOS logs. Enter DOT Information, Carrier Name, and Carrier Address in the Samsara Dashboard Settings under HOS/DVIR. Access driver HOS Reports from the main dashboard by navigating to Compliance > Driver HOS.	Compliance Settings Carrier Info & HOS Reporting
Determine rulesets	By default, your organization will automatically be configured to the USA (8/70 Property) ruleset with a 34-Hour Restart. You can adjust these settings to reflect the ruleset under which your organization operates. The best approach when adjusting these ruleset settings is to mimic the ruleset that your organization operated under prior to the ELD mandate.	Rulesets
Driver App Configuration		
General - Driver App	Customize the navigation and content of the app.	General - Driver App
Features - Driver App	Enable driver access to additional preset workflows such as driver messaging and Hours of Service workflows.	Features - Driver App
Driver Workflows - Driver App	Create custom workflows for drivers to complete in the Samsara Driver App.	Driver Workflows - Driver App
Troubleshoot Driver App issues	Troubleshoot Driver app login issues, Vehicle selection issues, Delays in Viewing DVIR and Documents in the Dashboard, Diagnostic and Malfunction Events and Driver App Connectivity Issues	Driver App Issues
Safety Configuration		
Configure AI event detection	Samsara's AI Event Detection will alert drivers of potential safety risks on the road in real-time. When these AI features are enabled, you will receive alerts in your Safety Inbox and you can also choose to have in-cab audio coaching for drivers enabled. Navigate to Settings -> Safety -> Event Detection -> AI Event Detection	AI Event Detection Overview
Configure coaching settings	To customize and streamline the coaching experience for both coaches and drivers, you can configure coaching settings. To view settings, navigate to Settings -> Fleet -> Safety > Coaching.	Custom Coaching Settings
Configure harsh event sensitivity	Safety Events are triggered when the VG's built-in accelerometer detects that your vehicle has surpassed a G-force threshold. Samsara sets a default sensitive by vehicle type but you can go to Settings > Safety > Harsh Events to configure the Harsh Event Sensitivity of your fleet.	Harsh Event Detection
Configure safety alerts	Safety Alerts allow you to notify users within your company when a configured alert is triggered, such as harsh breaking, harsh accelerations/turns, and crashes.	Safety Alerts

Safety Reports	Schedule available Safety Reports such as Vehicle Safety report, Driver Safety report, Coaching effectiveness, Event Resolution reports.	Safety Reports
Configure safety score	You can use the Safety Score to encourage positive driving behaviors and to coach unsafe driving practices to help reduce the likelihood of accidents. Go to Settings (gear icon) -> Fleet -> Safety -> Safety Score.	Safety Score Configuration
Bulk update safety settings	The Safety Settings Bulk Uploader helps you configure safety settings across multiple vehicles using a CSV file. It is ideal for large or diverse fleets and simplifies onboarding, configuration, and testing workflows	Bulk Upload Safety Settings for Individual Vehicles
Update Speed limits	If you observe a discrepancy in the auto-detected speed limit in the Samsara dashboard, you can override the speed limits that Samsara automatically sets for your drivers. Speed limits can be edited directly from a speeding event, through the speed graph in the asset trip history, or using the Map Editor.	Overriding Auto-Detected Speed Limits
DVIR Configuration		
Create DVIR Templates or leverage existing Template	From the Samsara Dashboard, you can create DVIR templates with custom defects and assign them to individual vehicles or trailers.	DVIR Templates
Assign vehicles/trailers to template	There are two ways to add a Vehicle DVIR: from the Samsara Driver App or from the Samsara Dashboard. From the app, drivers can submit, review, and edit DVIRs.	Add Vehicle/Trailer to Template
Telematics Management		
Asset Tracking	Manage Asset tracking settings, status and reporting	Asset Tracking
Fuel & Energy	Manage Fuel & energy settings, idling reports, fuel card integrations, IFTA and sustainability reports.	Fuel Management
Maintenance	Manage Maintenance status, service logs, Preventative maintenance and DVIRs	Maintenance
Routing & Dispatch	Route planning settings, planned vs actuals and route reports	Route Planning
Hardware Installation/ Management		
Activate Gateways/Samsara Hardware	You can activate your gateways in the Samsara dashboard in "Settings -> Devices". You can also use the activation link in your order email.	Activate Hardware
Create installer role in dashboard and invite installers	Customer to assign the installer role to the applicable contacts - this can be 3rd party installers, upfitters and/ or internal fleet mechanics	Administrative Roles
Train installers (Installation best practice, installer workflow in Fleet	With the Samsara Fleet app, installers can easily onboard new Vehicle Gateways (VGs), Asset Gateways (AGs), and cameras.	Hardware Installation with the Samsara Fleet App

App)		
Vehicle Gateway Install Guide	Instructions to install Samsara Vehicle Gateway by cable type.	Vehicle Gateway Install by Cable
Dash Cam Install Guide	Instructions to install a new Samsara Dash cam (CM33/ 34)	Dash Cam Install Guide
Cable Exchange Process	Process to initiate cable exchange if a vehicle needs a different cable than what's available.	Cable Exchange Process
Webstore	You can purchase devices, licenses, and accessories for non-Enterprise fleets directly from the Samsara Webstore. You can also browse the Webstore to learn about new solutions you may not be using yet.	Samsara Webstore
Replace Gateway in existing vehicle	Replace the gateway in an existing vehicle which previously had another gateway - typically used when device is upgraded and/ or RMA	Replace a Vehicle Gateway (VG) with the Same Model
Move Gateway from one vehicle to another	Use this process to repurpose vehicle gateways. Typically used when hardware is removed from a vehicle that is decommissioned, totalled and/ or rental vehicles to repurpose on a new vehicle.	Move a Vehicle Gateway from One Vehicle to Another
Hardware Deactivation / Movement & RMA	Samsara support & returns/warranty policy. To Initiate an RMA contact Samsara Support.	Hardware Warranty and RMA Policy
Print a return label	After you initiate a return, you can print a return label in the Exchange History Report.	Print a return label
Gateway Health Reporting	The Gateway Health summary displays the health of your devices to enable you to monitor your device status from the Samsara dashboard. The summary provides at-a-glance information that you can use to identify issues with your gateways.	Gateway Health Reporting
Camera Health Reporting	The Camera Health report enables you to quickly gauge the health of your dash cameras and camera connectors to determine when action is required (Reports > Devices > Camera Health). The Dash Cam and Camera Connector reports display the device health status and recommendations to remediate any issues detected.	Camera Health Reporting
Review device health	Samsara recommends this be on at least quarterly cadence	Best Practices for Managing Device Health
Continuous Improvement & User Enablement		
Training		
Samsara Academy	Samsara learning platform with a catalog of courses for various program (safety, fuel, compliance etc) and platform training - this	Samsara Academy

	is helpful for onboarding new users and existing users looking for a refresher	
Knowledge base	Library of knowledge articles on product features and best practices.	Knowledge base
Weekly Webinars	Each week, we offer live and interactive, complimentary webinars you can attend to learn more about the platform while participating in a live Q&A with a Samsara expert. This is helpful for onboarding any new users to Samsara	Weekly Webinars
Quick Tip Video Library	Succinct videos include helpful visual guides for common workflows. Topics included - Administration Quick Tip Videos Vehicle Telematics Quick Tip Videos Compliance Quick Tip Videos Safety and Safety Coaching Quick Tip Videos	Quick Tip Video Library
Samsara Program Expert Workshops	Elevate your skills during these live virtual events, focused on strategic best practices in program management and policy communication. Connect and exchange insights with your peers, and earn a new professional credential to add to your resume!	Samsara Program Expert Workshops
Samsara Professional Credentials	Unlock possibility with Samsara Professional Credentials. Showcase your expertise in the Samsara Connected Operations platform while actively contributing to your organization's growth. These credentials are earned by participating in comprehensive learning experiences, organized by topic and hosted in a variety of formats and settings.	Samsara Professional Credentials
Feature Management	Features on the Feature Management page are available for opt-in until Samsara is ready to release the feature to all customers. When the feature is ready for release, the feature is automatically enabled for your organization and you cannot opt out at that stage. Settings > Organization > Feature Management	Feature Management
Data, Reporting & Integration		
Reporting		
Manage Alerts	Alerts provide actionable notifications and rich information to help you troubleshoot incidents within your organization. Setup existing alert triggers, Customize trigger settings and notification preferences for events that are outside of your organization's normal operations.	Manage Alerts
Manage Reports	To share important information with your colleagues, you can schedule reports to be sent to a group of users. When you schedule a report, you can customize the cadence and frequency at which you want to send reports.	Manage Reports

Advanced Custom Reports	Unlock deeper insights and make data-driven decisions with Advanced Custom Reports — a self-service tool for building reports tailored to your business needs. With the flexibility to choose specific fields, apply filters, group data, and add visualizations, you can transform raw data into actionable insights in just a few clicks.	Advanced Custom Reports
Integrate with Power BI	Connect Samsara data and third-party data into Microsoft Power BI to create KPI dashboards and uncover actionable business insights without having to write code.	Integrate with Power BI
Integrations		
Samsara APIs	The Samsara web API enables access to all of your data in the Samsara Cloud using an HTTPS-based RPC-style API. Use this to generate API tokens, review developer metrics and review API basics	API Basics
Developer Resources	Samsara provides all developer content on our public Developer Site located at https://developers.samsara.com/docs. This site houses the following features and content: API Reference Documentation, Developer Guides, Developer Changelog, Discussion Forum, API Explorer	Developer Resources
Developer Metrics	From the Developer Metrics page (Settings > Developer Metrics) you can view the health of your API and webhook deployments during development, test, and maintenance.	Developer Metrics
Video Library - Samsara Developer Tools	Samsara has an open ecosystem for developers to build integrations and applications using developer tools such as an open API. You can explore when and how to use available tools to build two-way integrations, apps, data lakes, and warehouses. The Developer Tools video series will help guide you to effectively use these resources throughout your development workflows	Video Library - Samsara Developer Tools
Integration - App Marketplace	Samsara's marketplace is full of official turnkey integrations that have already been built and designed with 3rd party applications to help optimize your fleet.	Integrate with Partner Applications Samsara Marketplace
Other Available Integrations	Library of available integrations with 3rd party applications by program and platform. These typically need an API key to be generated for authenticating with the 3rd party.	Available 3rd party Integrations
Integration - Solutions Integration Services (SIS) built Integration	Customers often need custom integrations between Samsara and their internal systems to automate daily tasks, reduce overhead, and make the Samsara experience seamless and easy to manage. As a professional service, our SIS team can help support customers with these needs. Typical engagements with SIS are; custom integrations, custom reporting, & technical advisory services.	How to Connect Your Data

Integration - 3rd party Integration	Integration work being done for a customer to integrate a system or custom report by a 3rd party would be classified here. These Reports or processes not built-in to the Samsara platform by default can be created via integration of popular programming languages and Samsara's open API https://www.samsara.com/api	Trusted Custom System Integration Partners
Billing & Accounting		
Account & Billing Status	From the Samsara dashboard (Settings > Organization > Billing), you can monitor the status of your Samsara account including: Account Status, Payment Status, Invoices, License Summary and Billing Contracts	Account & Billing Status
License Management	License Management is where you assign your Samsara licenses to the appropriate corresponding entities, such as drivers, devices, or users. License assignment provides entities access to gated functionalities, visibility into how your licenses are allocated across your organization, and helps you further manage billing.	License Management
Itemized Cost Breakdown	Samsara invoices provide high-level information on your hardware and software license purchases, including details such as license types, license quantity, cost per license, and total cost. With Itemized Cost Breakdown (Settings (Gear_Icon.png) > Billing) you can receive a detailed addendum with each invoice. This addendum includes entity-level license assignment and costs where entities refer to meaningful Samsara units such as devices, users, or drivers, to which licenses can be applied.	Itemized Cost Breakdown
Renewals	FAQs for renewals - note that specific terms may vary by customer, contact your Account representative for specific information.	Renewals
